

AI-POWERED INTERVIEW PREPARATION REPORT

Candidate Performance Review and Actionable Skills Gap Analysis

1. Candidate Profile Summary

Name: Dafnika

Username: DAFNIKA

Email: dafnika@gmail.com

Phone: 624001 7339040

Active Resume Filename: Copy of Black and White Minimalist Professional Resume A4 (1).pdf

Extracted Core Technical Skills:

Python, PHP, JavaScript, SQL, C, CSS, HTML, Pandas, Excel, Power BI

3. Skill-Gap Training Recommendations

Recommended Career Trajectory: Senior Software Architect, Technical Lead, engineering Manager

Suggested Online Courses:

- * Software Design and Architecture Specialization (Coursera / University of Alberta)
- * System Design Interview Prep (ByteByteGo)

Recommended Certifications:

- * AWS Certified Solutions Architect - Associate
- * Certified ScrumMaster (CSM)

4. Mock Interview Session Transcripts

Question 1: What is the difference between WHERE and HAVING clauses in SQL?

Your Response: having clause is used for checking conditions while having clause checks condition in group clause

Ideal Concept Answer: The WHERE clause is used to filter rows before any groupings are made, based on individual row values. It cannot be used with aggregate functions like SUM, AVG, or COUNT. The HAVING clause is used to filter groups formed by the GROUP BY clause, based on aggregate conditions. WHERE filters rows; HAVING filters groups.

Scores -> Semantic Fit: 63.9% | Grammar: 65.0% | Communication: 92.0% | Confidence: 100.0%

Feedback: ? Good answer. You demonstrate a solid grasp of the subject, though you could elaborate with more specific details. Consider explaining terms like: **filter, rows, groupings, made, based**.

Missing terms: filter, rows, groupings, made, based

Question 2: What is the difference between CSS Flexbox and Grid?

Your Response: css flexbox is more like a box for graphics while grid is for container structure

Ideal Concept Answer: CSS Flexbox is a one-dimensional layout system designed for laying out items in a single row or column. It handles alignment, space distribution, and wrapping. CSS Grid is a two-dimensional layout system designed for complex layouts with rows and columns. Flexbox is content-driven, whereas Grid is layout-driven.

Scores -> Semantic Fit: 82.6% | Grammar: 65.0% | Communication: 94.7% | Confidence: 86.7%

Feedback: ? Outstanding response! You have captured the semantic core of the concept with high technical accuracy. Consider explaining terms like: **layout, system, designed, laying, items**. Try to reduce filler words such as: like.

Missing terms: layout, system, designed, laying, items

Question 3: How do you handle missing values in a Pandas DataFrame?

Your Response: with fillna()

Ideal Concept Answer: Missing values (NaN) can be handled by identifying them using .isna() or .isnull(). They can be removed using .dropna() (either dropping rows or columns), or filled using .fillna() with a default value, the mean/median/mode, or using forward/backward fill (.ffill()/bfill()). Alternatively, missing values can be interpolated using .interpolate() for continuous time-series data.

Scores -> Semantic Fit: 30.6% | Grammar: 35.0% | Communication: 82.0% | Confidence: 80.0%

Feedback: ? Incomplete or incorrect answer. Review the ideal response to understand the key technical components of this topic. Consider explaining terms like: **missing, values, handled, identifying, using**.

Missing terms: missing, values, handled, identifying, using
